OAK-D on Windows

https://github.com/luxonis/depthai

https://github.com/luxonis/depthai-experiments

Steps

1. **Install <u>Chocolatey</u> (or whatever package manager you may already have installed, this just worked for me)**

2. Navigate to a new directory and clone <u>this</u> repo

   ```
   git clone https://github.com/luxonis/depthai-experiments.git
   ```

3. navigate to /depthai-experiments/gen2-record-replay

4. Install requirements by running

   ```
   pip install -r requirements.txt
   ```

5. Connect camera and test to see if it works by running

   ```
   python3 record.py
   ```

6. If working, add the `autoRecord.py` in our project repo and run it when ready to record!
